SOVEREIGN BIO-TRANSMUTATION & FULL-STACK CLOUD ARCHITECTURE MANUAL

SeedController Sovereign

Complete End-to-End Platform Working Guide, Step-by-Step Database & Netlify Setup, Multi-Profile NNN War Room, and Self-Touching Activity Calendar User Manual

SeedController Sovereign is an enterprise-grade, privacy-first web platform engineered for structured semen retention, 90-day neurological rebooting, **No Nut November (NNN)** campaign survival, and daily **Self-Touching & Intimate Activity** auditing. Built on **Netlify Serverless Functions** and **NeonDB Serverless PostgreSQL**, it pairs real-time biometric and habit telemetry with strict server-side elapsed-date immutability and multi-profile synchronization.

What This Master User Manual Covers

- **Complete Functional User Manual (Start to End):** Step-by-step operational instructions for every button, dropdown, modal, timer, calendar tile, filter, and interactive chart across all 9 platform tabs.
- **Multi-Profile Synchronization (`sc_profiles`):** How to switch between the 4 pre-seeded practitioner profiles (`default_monk`, `spartan_arjun`, `vedic_sage_108`, `neophyte_seeker`) or create your own custom profiles in one click.
- **Profile-Scoped November Daily Survival Matrix & Immutable Yearly Verdict:** How elapsed November dates automatically lock in Read-Only mode while current/future dates update `sc_nnn_daily_tracker`, and how `sc_nnn_yearly_status_view` computes immutable yearly outcomes (`'November Not Over Yet'`, `'Failed'`, `'Success'`).
- **Self-Touching & Intimate Activity Calendar (`sc_self_touching_records`):** Navigating the month-wise calendar across years (`2023–2030`), logging all 9 official statuses via network-safe status codes (`ST_01`–`ST_09`), and filtering between two dates or by status.
- **Clean Database Reset, Setup & Deployment:** Exact SQL scripts to delete legacy tables cleanly, initialize all 9 tables and 1 view, and deploy on Netlify with `DATABASE_URL`.

Platform Release	Database Engine	Serverless Runtime	Live API Ecosystem
v3.0 Sovereign Fresh Build	NeonDB PostgreSQL (9 Tables + 1 View)	Netlify Functions (`api.js`, `public-feed.js`)	PubMed, Reddit, YouTube, Art Institute, Wikimedia, Pollinations, NASA

Master Table of Contents

This manual is organized into twelve comprehensive chapters designed for both daily practitioners and technical administrators. Chapters 1 through 3 cover the platform overview, fresh database reset, Netlify deployment, and multi-profile architecture. Chapters 4 through 11 provide the complete, screen-by-screen functional user manual for every module on the platform. Chapter 12 provides the full SQL schema, serverless API payload reference, and troubleshooting checklist.

Chapter / Section Title & Operational Scope	Page No.
Chapter 1: Platform Vision, Functional Overview & What It Holds for the User	**Page 5**
1.1 Core Purpose & Daily Value for the Practitioner — How SeedController Sovereign unifies streak telemetry, neuro-recovery, NNN survival, and intimate activity auditing	5
1.2 Complete 9-Tab Navigation Architecture — Functional map of all 9 top-level workspace tabs and their backing NeonDB tables	5
1.3 The Four Pillars of Bio-Energetic Transmutation — Visual purity, seed retention, metabolic autophagy, and somatic urge redirection	7
Chapter 2: Step-by-Step Fresh Setup, Database Reset & Netlify Deployment	**Page 7**
2.1 Deleting Old Tables Cleanly in NeonDB — Exact SQL commands to drop legacy views and tables with CASCADE so zero constraint violations occur	7
2.2 Creating the Fresh 9-Table + 1-View Schema — Executing seedcontroller-neondb-schema.sql and verifying multi-profile seed records	8
2.3 Deploying to Netlify & Configuring DATABASE_URL — Installing pg, deploying via GitHub or Netlify CLI, and verifying the green NeonDB Connected pill	8
Chapter 3: Multi-Profile Architecture & Custom Profile Management (sc_profiles)	**Page 9**
3.1 Understanding the 4 Pre-Seeded Practitioner Profiles — Detailed comparison of default_monk, spartan_arjun, vedic_sage_108, and neophyte_seeker	9
3.2 Synchronized Profile Switching Across All 5 Dropdowns — How selecting a profile updates Streaks, Fasting, Habits, Relapses, Journals, NNN Matrix, and Activity Calendar	10
3.3 Three Step-by-Step Methods to Create a Custom Profile — Using the + New / Create Custom Profile modal, the NeonDB Setup tab, or direct SQL INSERT	10
Chapter 4: Command Center User Manual — Orb, Timers, Habits & Fasting	**Page 11**
4.1 Operating the 3D Evolving Seed / Aura Orb — Interactive 3D constellation sphere mechanics and the 8 harmonic frequency stages (396 Hz to 963 Hz)	11
4.2 Multi-Track PMO / P-Free / MO-Free Streak Timers — Second-by-second tracking and calibrating custom start dates via Edit Start Date	12
4.3 Daily Energy Transmutation Habits Checklist (sc_daily_habits) — Completing daily habits for Aura XP and how toggle_habit syncs per profile	12

Chapter / Section Title & Operational Scope	Page No.
4.4 Profile-Scoped Intermittent Fasting Tracker — Operating 16:8, 18:6, 20:4, and 24h protocols and tracking ketosis and autophagy stages	13
4.5 Discreet Privacy Blur Mode & Daily Stoic Transmissions — One-click 14px public privacy shield and live DummyJSON Stoic quote stream	13
Chapter 5: NNN War Room User Manual — 30-Day Survival Matrix & Urge Meter	**Page 14**
5.1 Navigating the NNN Challenge Hub & Countdown Clock — Pre-November countdown vs. active November survival telemetry	14
5.2 Profile-Scoped 30-Day November Daily Survival Matrix (sc_nnn_daily_tracker) — Selecting profiles and challenge years (2023–2030) and cycling daily survival states	14
5.3 Elapsed-Date Immutability Rule & Demo Reference Mode — Why elapsed November dates lock as Read-Only and how to test mid-November lock behavior	15
5.4 NNN Urge Intensity Thermometer & Defcon Prescriptions (0–10) — Using the 0–10 urge slider, reading Defcon 5/3/1 countermeasures, and logging readings to NeonDB	15
Chapter 6: Year-Wise Immutable NNN Challenge Status Audit (sc_nnn_yearly_status_view)	**Page 16**
6.1 Inspecting Whether a Profile Succeeded or Failed in Any Year — Using the Profile Key and Challenge Year selectors in the Year-Wise Status section	16
6.2 The Three Strict Immutable Statuses Explained — Exact SQL and frontend evaluation rules for November Not Over Yet, Failed, and Success	16
6.3 How to Extend the Challenge Year Range Beyond 2030 — Step-by-step instructions for adding future years in SQL and frontend dropdowns	16
Chapter 7: NNN Media Hub — Top 50 YouTube Cinema, Reddit Scraper, Lore & Gallery	**Page 17**
7.1 Operating the Top 50 NNN YouTube Content Cinema — Category filtering, keyword search, inline youtube-nocookie.com playback, and YOUTUBE_API_KEY	17
7.2 Scraping Live Reddit Communities (3-Tier Keyless Pipeline) — Pulling live threads from r/nonutnovember, r/SemenRetention, and r/NoFap without API keys	17
7.3 NNN Funny Stories & Superpower Lore Vault (sc_nnn_stories) — Reading comedic chronicles, sending Laugh Salutes, and publishing new stories	18
7.4 History of NNN Timeline (1500 BCE – 2026) & Keyless Visual Gallery — Exploring the 6 historical epochs and 4 keyless art engines (Art Institute, Wikimedia, Pollinations, NASA)	18
Chapter 8: Self-Touching & Intimate Activity Records Calendar (sc_self_touching_records)	**Page 18**
8.1 Navigating the Month-Wise Activity Calendar Across Years (2023–2030) — Profile selection, KPI summary cards, and month/year navigation controls	18
8.2 Automatic Elapsed-Date Immutability vs. Current/Future Editing — How past dates (< Today) lock permanently while today and future dates remain editable	19
8.3 Logging & Clearing the 9 Official Activity Statuses (ST_01 to ST_09) — Complete guide to all 9 statuses and how status_code encoding prevents network keyword filtering	19

Chapter / Section Title & Operational Scope	Page No.
8.4 Filtering Calendar Views Between 2 Dates & By Activity Status — Using the From/To date range filter, status chips, and synchronized records table	20
Chapter 9: 90-Day Reboot Plan, 8 Rank Tiers, 12-Week Ladder & Relapse Ledger	**Page 21**
9.1 Unlocking the 8 Rank Progression Tiers — Complete progression table from Seed Initiate (Day 0) to Brahmacharya Sage (Day 180+)	21
9.2 Tracking the 12-Week Visual Ladder & Neuro-Recovery Chart — Understanding Dopamine D2 resensitization, androgen receptor density, and DeltaFosB clearance	21
9.3 Using the Non-Destructive Historical Relapse Ledger (sc_relapse_logs) — Logging PMO, P-Only, or MO-Only slips with trigger analysis while preserving longest_streak_days	22
Chapter 10: Emergency Urge SOS, 432Hz Binaural Breathwork & AI Neural Mentor	**Page 22**
10.1 Executing the 90-Second Emergency Urge SOS Protocol — Step-by-step physical override sequence when an acute urge wave strikes	22
10.2 Operating the 3-Mode Paced Breathwork Ring & 432Hz Synthesizer — Using 4-4-4-4 Box, 4-7-8 Vagal Brake, and 6-3-6 Ojas Draw alongside Web Audio binaural beats	23
10.3 Consulting the 24/7 Context-Aware AI Neural Mentor — Using quick-prompt chips and custom questions calibrated to your active streak	23
Chapter 11: Science Feed, Blogs, Private Journal, Brotherhood Wall & Porn Blocker	**Page 24**
11.1 Querying Live NIH NCBI PubMed Clinical Studies — Fetching real-time peer-reviewed literature on neuroplasticity, abstinence, and autonomic tone	24
11.2 Reading, Upvoting & Publishing in Blogs & Field Reports (sc_blogs) — Using the modal reader, category filters, and article publishing workflow	24
11.3 Recording Private Journal Reflections & Brotherhood Pledges — Logging daily mood, energy, and urge intensity in sc_journal_entries and sc_community_checkins	24
11.4 Generating a Custom /etc/hosts Porn Blocker & JSON Backups — Downloading seedcontroller-hosts-shield.txt and exporting full JSON state snapshots	25
Chapter 12: Complete Database Reference, API Payloads & Troubleshooting Guide	**Page 25**
12.1 Complete NeonDB PostgreSQL Table & View Reference — Field-by-field schema guide for all 9 tables and sc_nnn_yearly_status_view	25
12.2 Serverless API Endpoint Specification (/.netlify/functions/api) — Complete catalog of GET parameters and POST action payloads	26
12.3 End-to-End Troubleshooting & Verification Checklist — Resolving connection issues, verifying green pill status, and auditing database writes	27

Chapter 1: Platform Vision, Functional Overview & What It Holds for the

User

1.1 Core Purpose & Daily Value for the Practitioner

Most habit trackers treat impulse control as a simple counter that resets to zero when a slip occurs, erasing weeks of hard-earned progress and offering no physiological or behavioral context. **SeedController Sovereign** is architected from the ground up as an all-in-one bio-transmutation command center. It recognizes that sustainable discipline requires four interconnected capabilities working together every day:

1. **Multi-Track Precision Telemetry:** Instead of a single binary counter, the platform tracks three distinct retention streams down to the second—**PMO-Free** (complete abstinence from pornography, masturbation, and orgasm), **P-Free (Visual Purity)** (abstinence from artificial supranormal visual stimuli), and **MO-Free (Seed Retained)**—alongside an indestructible **All-Time Longest Streak** record.
2. **Active Energy Sublimation & Metabolic Autophagy:** Retaining life-force energy without redirecting it creates internal restlessness. The platform pairs retention tracking with **6 Daily Energy Transmutation Habits** (cold hydro-exposure, pranayama breathwork, compound strength training, 90-minute deep creation blocks, zero-edging vigilance, and digital sunset curfews) and a profile-scoped **Intermittent Fasting Tracker** (`16:8`, `18:6`, `20:4`, and `24h` protocols) so conserved energy is systematically converted into physical vitality and mental output.
3. **Immutable Historical Auditing (NNN Matrix & Self-Touching Calendar):** True self-mastery demands honest, tamper-proof accountability. In both the **30-Day November Daily Survival Matrix** (`sc_nnn_daily_tracker`) and the **Self-Touching & Intimate Activity Calendar** (`sc_self_touching_records`), any date that has already elapsed (`date < today`) automatically locks in **Read-Only / Immutable Mode** on both the browser frontend and the PostgreSQL serverless backend (HTTP 403). Meanwhile, current and future dates remain fully editable so practitioners can log today's status or pre-commit future dates.
4. **Real-Time Emergency Somatic Override:** When an acute limbic craving strikes—typically late at night or during periods of high stress—willpower alone is slow. SeedController Sovereign provides an instant **Emergency Urge SOS Overlay** (90-second prefrontal override timer), a **3-Mode Animated Breathwork Pacer**, a synthesized **432Hz Theta Binaural Hypnosis Drone**, an interactive **0–10 NNN Urge Intensity Thermometer**, and a **24/7 Context-Aware AI Neural Mentor**.

1.2 Complete 9-Tab Navigation Architecture

The top navigation bar provides instant, single-page tab switching across nine specialized modules without page reloads. Every module is responsive from 320px mobile screens to 4K ultra-wide monitors and synchronizes with your active profile in NeonDB PostgreSQL:

Tab #	Navigation Button Label	Core User-Facing Features & Controls	NeonDB Tables & Live APIs
Tab 1	**Command Center**	Active Profile Switcher, 3D Evolving Seed Orb (8 stages), PMO/P/MO live timers, Custom Start Date modal, 6 Daily Transmutation Habits, Intermittent Fasting Tracker, Neuro-Endocrine telemetry bars, and Daily Stoic Quote card.	`sc_profiles`, `sc_daily_habits`, DummyJSON Quotes API

Tab #	Navigation Button Label	Core User-Facing Features & Controls	NeonDB Tables & Live APIs
Tab 2	**NNN Challenge Hub**	Live November Countdown/Survival Clock, Profile-Scoped 30-Day November Survival Matrix, 0–10 Urge Thermometer & Defcon Gauge, Year-Wise Immutable NNN Status (2023–2030), Top 50 YouTube Cinema, Live Reddit Scraper, Funny Stories Vault, History Timeline, Visual Gallery, and API Keys Vault.	`sc_nnn_daily_tracker`, `sc_nnn_yearly_status_view`, `sc_nnn_stories`, YouTube, Reddit, Art Institute, Wikimedia, Pollinations, NASA
Tab 3	**Self-Touching & Activity Calendar**	Profile-scoped 7-column month-wise calendar across years (2023–2030), automatic elapsed-date immutability, 9 official intimate activity statuses, Between 2 Dates filter, Status Filter chips, and matching records table.	`sc_self_touching_records`, `sc_profiles`
Tab 4	**90-Day Reboot & Ranks**	8 Unlockable Rank Progression Badges, 12-Week Rising Drop Visual Ladder, Dopamine D2 & Androgen Recovery Chart, and Non-Destructive Historical Relapse Ledger.	`sc_relapse_logs`, `sc_profiles`
Tab 5	**Urge Shield & Breathwork**	Animated Breathwork Visual Ring (4-4-4-4 Box, 4-7-8 Vagal Brake, 6-3-6 Ojas Draw), 432Hz Web Audio Binaural Synthesizer, and 24/7 AI Neural Mentor chat interface.	Web Audio API, `sc_profiles`
Tab 6	**Science & Live APIs**	Clinical Neurobiology Curriculum cards plus live NIH NCBI PubMed E-Utilities research search and live Reddit community pulse.	NCBI PubMed API, Reddit Public JSON
Tab 7	**Blogs & Articles**	Category-filtered repository of endocrinology, neuroscience, and transmutation articles with full modal reader, upvote counter, and article publishing form.	`sc_blogs`, `sc_profiles`
Tab 8	**Journal & Brotherhood**	Private Retention & Transmutation Journal (with Mood, Energy 1–10, and Urge 0–10 sliders) alongside the public Brotherhood Accountability Check-In Wall.	`sc_journal_entries`, `sc_community_checkins`
Tab 9	**NeonDB & Blocker Setup**	Live NeonDB connection diagnostic console, profile key loader/saver, custom trigger-domain `/etc/hosts` blocklist generator, and portable JSON backup exporter.	`sc_profiles`

1.3 The Four Pillars of Bio-Energetic Transmutation

Every visual indicator and XP reward in SeedController Sovereign is grounded in peer-reviewed neuroendocrinology and autonomic physiology:

- **Pillar I — Serum Testosterone & Androgen Receptor Upregulation (Days 1–14):** As documented by Jiang et al. (2003) in the *Journal of Zhejiang University SCIENCE* (PMID: 12659241), serum testosterone remains near baseline during Days 1–6 of abstinence and surges to **145.7% of baseline on Day 7**. Sustained retention prevents repeated post-ejaculatory prolactin spikes and upregulates androgen receptor (AR) sensitivity in the prefrontal cortex.
- **Pillar II — Striatal Dopamine D2 Resensitization (Days 14–60):** Neuroimaging research by Kühn and Gallinat (2014) in *JAMA Psychiatry* (PMID: 24871202) demonstrated that chronic supranormal visual novelty downregulates striatal D2 receptors and reduces functional connectivity to the dorsolateral prefrontal cortex (dlPFC). Removing artificial triggers allows tonic dopamine levels to normalize and clears accumulated **DeltaFosB** (the molecular switch of compulsion) over a 4-to-8-week window.
- **Pillar III — Vagal Brake Activation & Respiratory Sinus Arrhythmia (Daily):** Systematic reviews by Zaccaro et al. (2018) in *Frontiers in Human Neuroscience* (PMID: 29616846) confirm that slow paced breathing (particularly lengthened exhalations in 4-7-8 and 6-3-6 patterns) increases heart-rate variability (HRV), activates the parasympathetic vagus nerve, and restores top-down prefrontal inhibition over amygdala craving circuits within 90 seconds.
- **Pillar IV — Intermittent Fasting & BDNF / Autophagy Synergy:** Pairing retention with daily 16-to-24-hour fasting windows accelerates hepatic glycogen depletion, elevates beta-hydroxybutyrate (ketones), and upregulates brain-derived neurotrophic factor (BDNF), sharpening mental clarity and eliminating the lethargic "flatline" adaptation phase.

Chapter 2: Step-by-Step Fresh Setup, Database Reset & Netlify Deployment

2.1 Deleting Old Tables Cleanly in NeonDB

If you previously ran an older version of the database schema (where `sc_nnn_daily_tracker` had a 2-column unique constraint without `profile_key`, or where legacy check constraints existed), starting afresh by dropping the SeedController tables ensures zero constraint or duplicate-key violations can ever occur.

1. Open your browser and log in to the **Neon Console** at `https://console.neon.tech/`.
2. Select your project and click **SQL Editor** in the left sidebar.
3. Verify that your target database (whatever name you chose when creating your NeonDB database) is selected in the database dropdown at the top of the editor.
4. Execute the following clean drop block to remove only the SeedController view and tables (any unrelated tables in your database remain completely untouched):

```
DROP VIEW IF EXISTS sc_nnn_yearly_status_view CASCADE;

DROP TABLE IF EXISTS
    sc_self_touching_records,
```

```
    sc_nnn_stories,
    sc_nnn_daily_tracker,
    sc_community_checkins,
    sc_blogs,
    sc_journal_entries,
    sc_relapse_logs,
    sc_daily_habits,
    sc_profiles
CASCADE;
```

Note: This exact `DROP VIEW` and `DROP TABLE ... CASCADE` block is already included at the very top of `seedcontroller-neondb-schema.sql` (`sql/schema.sql` inside `seedcontroller-netlify.zip`), so running that file performs both the cleanup and the fresh build in a single click.

2.2 Creating the Fresh 9-Table + 1-View Schema

1. Open `seedcontroller-neondb-schema.sql` (or `sql/schema.sql` from the unzipped project folder).
2. Copy the entire SQL file, paste it into the **NeonDB SQL Editor**, and click **Run**.
3. Within 1–2 seconds, NeonDB will execute all three stages of the script:
   - **Stage 1:** Drops any legacy SeedController view and tables cleanly.
   - **Stage 2:** Creates all **9 tables** (`sc_profiles`, `sc_daily_habits`, `sc_relapse_logs`, `sc_journal_entries`, `sc_blogs`, `sc_community_checkins`, `sc_nnn_daily_tracker`, `sc_nnn_stories`, `sc_self_touching_records`) and the read-only view `sc_nnn_yearly_status_view` (covering years `2023` through `2030`).
   - **Stage 3:** Seeds the **4 distinct practitioner profiles** (`default_monk`, `spartan_arjun`, `vedic_sage_108`, `neophyte_seeker`) along with their profile-specific daily habits, historical relapse logs, private journals, multi-year NNN matrices, and self-touching calendar records.
4. In the Neon Console left sidebar, click **Dashboard** (or **Connection Details**) and copy your **Pooled PostgreSQL Connection String**:

   ```
   postgresql://USER:PASSWORD@ep-xyz-pooler.region.aws.neon.tech/YOUR_DB_NAME?sslmode=require
   ```

2.3 Deploying to Netlify & Configuring DATABASE_URL

The project archive (`seedcontroller-netlify.zip`) is structured with all files at the root of the archive so Netlify automatically detects `index.html`, `package.json`, `netlify.toml`, and the serverless handlers in `netlify/functions/`:

1. **Unzip the Archive:** Extract `seedcontroller-netlify.zip` into a new local folder (e.g., `seedcontroller-sovereign/`).
2. **Install Node Dependencies:** Open a terminal inside that folder and run:

   ```
   npm install
   ```

   This installs the `pg` (`node-postgres`) driver listed in `package.json` so `netlify/functions/api.js` can connect to NeonDB.
3. **Deploy to Netlify:**

- **Method A — GitHub Continuous Deployment (Recommended):** Push the folder to a GitHub repository. In Netlify (`https://app.netlify.com/`), click **Add new site → Import an existing project → GitHub**, select your repository, leave **Build command** blank, set **Publish directory** to `.`, and set **Functions directory** to `netlify/functions`.
- **Method B — Netlify CLI Direct Deployment:** Run `npx netlify-cli deploy --prod` from your terminal inside the project directory.

4. **Set the `DATABASE_URL` Environment Variable:**
   - In your Netlify Site Dashboard, open **Site configuration → Environment variables → Add a variable → Add a single variable**.
   - Enter **Key:** `DATABASE_URL`
   - Enter **Value:** Paste your full NeonDB PostgreSQL connection string from Section 2.2.
   - Keep all scopes checked (Builds, Functions, Post processing) and click **Create variable**.
5. **Trigger a Fresh Deploy:** Go to **Deploys → Trigger deploy → Deploy site** so the serverless functions reload with your new environment variable.
6. **Verify the Green Status Pill:** Open your deployed Netlify site URL. Within 1 second, the top-right status badge will turn solid emerald green and display **● `NeonDB Connected`**.

Chapter 3: Multi-Profile Architecture & Custom Profile Management (sc_profiles)

3.1 Understanding the 4 Pre-Seeded Practitioner Profiles

To demonstrate how the platform adapts to different practitioner stages, fasting regimens, and historical records right out of the box, `sc_profiles` is pre-seeded with four distinct profiles. Switching between them immediately changes the appearance and telemetry of the Command Center, Intermittent Fasting Tracker, November Daily Survival Matrix, Year-Wise NNN Status, and Self-Touching Calendar:

Profile Key (`sc_profiles`)	Display Name & Rank	Streaks & Aura XP	Intermittent Fasting State	Seeded NNN & Calendar History
`default_monk`	**Sovereign Initiate** Neural Warrior (Day 14+)	PMO: 14d 8h P-Free: 21d 4h Best: 21d • 420 XP	**Standby (16:8 Protocol)** Target: 16 Hours 2/6 Habits Done Today	**NNN:** 2023 Success, 2024 Failed (Nov 11), 2025 Success, 2026 Active (14/30) **Calendar:** 11 Oct/Nov logs
`spartan_arjun`	**Spartan Commander Arjun** Alchemical Transmuter (Day 30+)	PMO: 42d 6h P-Free: 56d 2h Best: 56d • 1,180 XP	**Active Fast (18:6 Protocol)** 14h 25m Elapsed (Ketosis & BDNF) 5/6 Habits Done Today	**NNN:** 2023 Failed (Nov 19), 2024 Success, 2025 Success, 2026 Active (22/30) **Calendar:** 7 Oct/Nov logs

Profile Key (sc_profiles)	Display Name & Rank	Streaks & Aura XP	Intermittent Fasting State	Seeded NNN & Calendar History
vedic_sage_108	**Brahmacharya Sage 108** Ascended Architect (Day 90+)	PMO: 95d 11h P-Free: 120d 5h Best: 120d • 2,640 XP	**Active Fast (20:4 Protocol)** 19h 10m Elapsed (Deep Autophagy) 6/6 Habits Done Today	**NNN:** 2023 Success, 2024 Success, 2025 Success, 2026 Clean (30/30) **Calendar:** 6 pure celibacy logs
neophyte_seeker	**Reboot Challenger** Spark Keeper (Day 3+)	PMO: 3d 15h P-Free: 7d 9h Best: 12d • 145 XP	**Standby (24h Protocol)** Target: 24h Solar Reset 1/6 Habits Done Today	**NNN:** 2023 Failed (Nov 3), 2024 Failed (Nov 4), 2025 Failed (Nov 9), 2026 Failed (Nov 6) **Calendar:** 8 mixed logs

3.2 Synchronized Profile Switching Across All 5 Dropdowns

For maximum convenience, you never have to leave your current tab to switch profiles. The platform provides **five synchronized Profile Key dropdowns**, all populated dynamically from the `sc_profiles` table in NeonDB:

1. **Global Header Profile Selector (`#globalProfileSelect`):** Always visible in the top-right bar next to the `+ New` button and the `NeonDB Connected` pill.
2. **Command Center Profile Switcher (`#dashboardProfileSelect`):** Located in the top banner of the **Command Center** tab, displaying the active practitioner name, target days, fasting status, and blocker strictness.
3. **November Daily Survival Matrix Profile Selector (`#nnnMatrixProfileSelect`):** Located directly inside the control bar of the 30-day November Survival Matrix in the **NNN Challenge Hub**.
4. **Year-Wise NNN Status Profile Selector (`#nnnStatusProfileSelect`):** Located inside the **Year-Wise NNN Challenge Status By Profile** audit section.
5. **Self-Touching Calendar Profile Selector (`#stProfileSelect`):** Located at the top-right of the **Self-Touching & Intimate Activity Records Calendar** tab.

Whenever you select a profile in *any* of those five dropdowns, `switchActiveProfile(newProfileKey)` executes automatically: it updates all five dropdowns to match, loads that profile's streak clocks, 3D orb stage, daily habits, intermittent fasting timer, relapse ledger, journal entries, multi-year November Survival Matrix, Year-Wise NNN verdicts, and Self-Touching Calendar, and performs a live background sync with `/.netlify/functions/api?profileKey=...`.

3.3 Three Step-by-Step Methods to Create a Custom Profile

When you are ready to track your own personal journey under your own name and profile key, you can create a custom profile in three ways:

- **Method 1 — Using the In-App `+ New` / ➕ `Create Custom Profile` Modal (Recommended):**

1. Click the `+ New` button inside the top-right header profile pill (or click ➕ `Create Custom Profile` in the Command Center banner).
2. In the **Create Custom Profile** modal, fill in:
   - **Unique Profile Key (`profile_key`):** e.g., `arjun_sovereign_2026` (any spaces are automatically converted to underscores).
   - **Practitioner Display Name (`display_name`):** e.g., `Arjun Sovereign`.
   - **Target Reboot Goal:** Choose `30 Days`, `60 Days`, `90 Days`, `180 Days`, or `365 Days`.
   - **Fasting Protocol:** Choose `16:8 Lean Gains (16h)`, `18:6 Warrior Monk (18h)`, `20:4 Deep Autophagy (20h)`, or `24h Full Solar Reset`.
3. Click 🚀 **Create & Switch to Profile**. The app sends `action: "create_profile"` to `/.netlify/functions/api`, inserts your row into `sc_profiles`, initializes clean empty matrices in `sc_nnn_daily_tracker` and `sc_self_touching_records`, adds your profile to all five dropdowns, and switches to it immediately.

- **Method 2 — Using the 🗄️ `NeonDB & Blocker Setup` Tab:**
  1. Click 🗄️ **NeonDB & Blocker Setup** in the navigation bar.
  2. Type your desired key into **Unique NeonDB Profile Key** and your title/name into **Practitioner Title / Name**.
  3. Click ⬆️ **Force Save State to NeonDB**. If the key does not exist yet in `sc_profiles`, the platform creates a clean profile record in NeonDB and selects it across all dropdowns.
- **Method 3 — Directly via SQL in the NeonDB SQL Editor:**

  ```
  INSERT INTO sc_profiles (profile_key, display_name, target_days, fasting_target_hours)
  VALUES ('my_sovereign_key', 'Practitioner Name', 90, 18)
  ON CONFLICT (profile_key) DO NOTHING;
  ```

  After running the query, click the **NeonDB Connected** button in the header to refresh the dropdown list.

Chapter 4: Command Center User Manual — Orb, Timers, Habits & Fasting

4.1 Operating the 3D Evolving Seed / Aura Orb

The left hero panel of the Command Center houses the **Interactive 3D Evolving Seed / Aura Orb** rendered at 60 FPS on an HTML5 `<canvas>` element using a 110-node golden-spiral spherical projection:

- **Interactive 3D Rotation & Pulse Boost:** Click and drag (or touch and swipe on mobile) anywhere on the orb canvas to rotate the 3D node constellation along the X and Y axes. Touching the orb injects a kinetic pulse boost that expands the ambient radial corona and accelerates node rotation before smoothly damping back to equilibrium.
- **Automatic 8-Stage Evolution:** The orb's core color, stage title (`#orbStageTitle`), and Solfeggio harmonic frequency tag (`#orbFrequencyTag`) automatically evolve based on your active profile's PMO-Free streak days:

- **Days 0–2:** *Ember Seed • Stage I* (`396 Hz Grounding`, Violet Halo)
- **Days 3–6:** *Vital Spark • Stage II* (`417 Hz Clearing`, Cyan Pulse)
- **Days 7–13:** *Androgen Pulse • Stage III* (`432 Hz Harmony`, Emerald Core)
- **Days 14–29:** *Solar Core • Stage IV* (`528 Hz Repair`, Solar Gold)
- **Days 30–59:** *Ojas Vortex • Stage V* (`639 Hz Radiance`, Amber Fire)
- **Days 60–89:** *Supernova Halo • Stage VI* (`741 Hz Awakening`, Magenta Nova)
- **Days 90–179:** *Crystalline Star • Stage VII* (`852 Hz Mastery`, Diamond Cyan)
- **Days 180+:** *Cosmic Singularity • Stage VIII* (`963 Hz Crown`, Radiant White-Gold)

4.2 Multi-Track PMO / P-Free / MO-Free Streak Timers

The right hero panel displays the live **Multi-Track Retention Clock**, which updates every 1,000 milliseconds:

- **Primary 4-Tile Digital Clock (`Days : Hours : Minutes : Seconds`):** Displays the exact elapsed duration since your active profile's `pmo_start_time`.
- **Three Secondary Metric Cards:**
  - **P-Free (Visual Purity):** Elapsed days since `p_start_time`. If you experience a non-visual slip (`MO_ONLY`), your P-Free streak continues unbroken.
  - **MO-Free (Seed Retained):** Elapsed days since `mo_start_time`.
  - **All-Time Best Streak:** Your highest historical streak (`longest_streak_days`), which automatically ratchets upward whenever your current streak surpasses your previous record and never decreases on a reset.
- **How to Backdate or Calibrate Your Start Date (`📅 Edit Start Date`):**
  1. Click the 📅 **Edit Start Date** button at the top-right of the streak panel.
  2. In the **Calibrate Retention Start Dates** modal, select the exact date and time for your **PMO / MO Start Date & Time** and your **P-Free (Visual Purity) Start Date & Time**.
  3. Click **Save & Sync**. The timers recalculate immediately and `update_profile` updates `sc_profiles` in NeonDB.

4.3 Daily Energy Transmutation Habits Checklist (sc_daily_habits)

Below the hero row on the left is the **Daily Energy Transmutation Habits** checklist. It provides six daily behavioral anchors that convert retained biological drive into productive output:

Habit Code	Habit Label Displayed in UI	Aura XP Reward	Physiological / Transmutation Mechanism
`cold_exposure`	❄️ Cold Shower / Vagal Hydro-Reset (3 mins)	**+30 XP**	Elevates baseline norepinephrine by 200–300% and trains top-down prefrontal shock control.
`pranayama`	🧘 10-Min Pranayama / Ojas Upward Draw	**+25 XP**	Contracts pelvic floor (Mula/Ashwini Mudra) and increases vagal heart-rate variability.

Habit Code	Habit Label Displayed in UI	Aura XP Reward	Physiological / Transmutation Mechanism
`heavy_training`	🏋️ Compound Strength / High-Intensity Output	**+35 XP**	Directs serum testosterone and androgen receptor sensitivity into muscular hypertrophy.
`deep_creation`	💻 90-Min Undistracted Deep Work / Study Block	**+40 XP**	Channels morning tonic dopamine into high-leverage coding, study, or creative architecture.
`zero_edging`	🛡️ Zero Peek & Zero Dopamine Binge Scrolling	**+35 XP**	Prevents conditioned cue-reactivity and DeltaFosB re-sensitization in the nucleus accumbens.
`night_curfew`	🌙 Digital Sunset (Phone Away 45m Before Sleep)	**+25 XP**	Eliminates the #1 high-risk relapse window (late-night bedroom scrolling in a fatigued state).

How to Use: Click any habit row to toggle it done or undone for today. Clicking a habit sends `action: "toggle_habit"` to `/.netlify/functions/api`, inserting or deleting the record in `sc_daily_habits` for `(profile_key, habit_code, CURRENT_DATE)` and adjusting your profile's `aura_points` in `sc_profiles`.

4.4 Profile-Scoped Intermittent Fasting Tracker

Located on the right side of the middle row, the **Intermittent Fasting Tracker** is scoped directly to the active profile in `sc_profiles`:

1. **Select Fasting Protocol:** Use the protocol dropdown (`#fastingProtocolSelect`) to choose **16:8 Lean Gains (16h)**, **18:6 Warrior Monk (18h)**, **20:4 Deep Autophagy (20h)**, or **24h Full Solar Reset**. Changing the dropdown immediately updates `fasting_target_hours` in `sc_profiles`.
2. **Start or Complete a Fast:**
   - When in **Standby** (e.g., on `default_monk` or `neophyte_seeker`), click ⚡ **Start Fasting Window**. This sets `fasting_active = true` and `fasting_start_time = NOW()` in `sc_profiles` and starts the live `HH:MM:SS` count-up clock.
   - As your fast progresses, the **Metabolic Stage Badge** (`#fastingMetabolicStageBadge`) transitions automatically:
     - **0h–11h:** `⚡ Lipolysis Ramp-Up` (Insulin drops, glycogen mobilization begins)
     - **12h–17h:** `🔥 Ketosis & BDNF Active` (Ketone bodies rise, brain-derived neurotrophic factor upregulates)
     - **18h+:** `🧬 Deep Autophagy & HGH Surge` (Cellular recycling and human growth hormone surge)
   - Click 🟥 **Complete Fast (+35 Aura XP)** when finished to award `+35 Aura XP` and reset the timer to Standby.

4.5 Discreet Privacy Blur Mode & Daily Stoic Transmissions

- **Discreet Privacy Blur (`🔒 Discreet Mode`):** Located in the top-right header bar. Clicking it applies `filter: blur(14px)` and disables pointer events across the main workspace so you can leave the app

open in a café, office, or library without anyone reading your screen. Click **Unlock View** to unblur.

- **Daily Stoic & Transmutation Transmission:** Located at the bottom of the Command Center. Streams live philosophical quotes from the keyless **DummyJSON Quotes REST API** (`https://dummyjson.com/quotes/random`) with a curated Stoic/Brahmacharya fallback rotation. Click 🔄 **New Transmission** anytime to fetch a fresh quote.

Chapter 5: NNN War Room User Manual — 30-Day Survival Matrix & Urge Meter

5.1 Navigating the NNN Challenge Hub & Countdown Clock

Clicking 🍂 **NNN Challenge Hub** in the main navigation bar opens the dedicated No Nut November War Room. At the top of the hub is the **Spartan Autumn Citadel Hero Banner** and the **Live NNN Clock**:

- **Pre-November Mode (Jan 1 – Oct 31 & Dec 1 – Dec 31):** Automatically counts down the exact `Days : Hours : Minutes : Seconds` until November 1st (`00:00:00`) of the upcoming campaign.
- **Active November Campaign Mode (Nov 1 – Nov 30):** Automatically switches to an active survival countdown showing the exact time remaining until December 1st (`00:00:00`) victory.

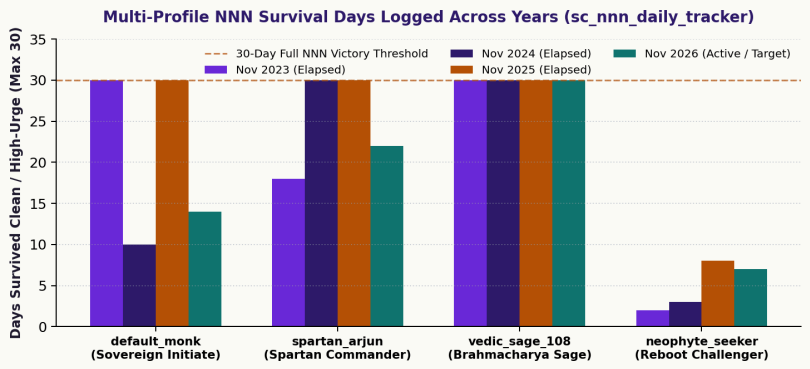

Figure 5.1 — Multi-year NNN survival performance across the 4 pre-seeded practitioner profiles in sc_nnn_daily_tracker (2023–2026).

5.2 Profile-Scoped 30-Day November Daily Survival Matrix (sc_nnn_daily_tracker)

In the first sub-tab (🗓️ **30-Day Tracker & Urge Meter**), the left 7-column panel houses the **November Daily Survival Matrix**. Every cell (`Nov 1` through `Nov 30`) is scoped to both the selected **Profile Key (`sc_profiles`)** and the selected **Challenge Year (`2023–2030`)**:

1. **Select Profile Key:** Use the **Profile Key (`sc_profiles`)** dropdown (`#nnnMatrixProfileSelect`) to choose `default_monk`, `spartan_arjun`, `vedic_sage_108`, `neophyte_seeker`, or any custom profile you created.
2. **Select Challenge Year:** Use the **Challenge Year** dropdown (`#nnnMatrixYearSelect`) to view or plan any November from `November 2023` to `November 2030`.
3. **Cycle Daily Status on Editable Dates:** Clicking any editable day cell (`Nov 1` – `Nov 30`) cycles through four states and immediately sends `action: "log_nnn_day"` to `/.netlify/functions/api`, updating `sc_nnn_daily_tracker` **only for that profile and year**:

- 🛡️ **Clean (`survived`):** Emerald tile. Awards `+25 Aura XP` to the active profile and logs a clean day (`urge_level = 2`).
- 🔥 **Urge Won (`danger_zone`):** Amber tile. Logs a high-urge battle won without relapsing (`urge_level = 7`).
- 💀 **Slip (`fallen`):** Crimson tile. Logs a failure on that day (`urge_level = 9`) and immediately updates that profile's Year-Wise NNN Status for that year to `'Failed'`.
- ⏳ **Pending (`unlogged`):** Neutral tile. Deletes the row for `(profile_key, challenge_year, day_number)` from `sc_nnn_daily_tracker`.

5.3 Elapsed-Date Immutability Rule & Demo Reference Mode

To prevent retroactive tampering with past November records, the November Daily Survival Matrix enforces strict **Elapsed-Date Immutability** on both the client and server:

- **How Elapsed Lock Works:** For any day `d` (1–30) and year `Y`, the platform constructs the ISO date `YYYY-11-DD` and compares it against today's date (`CURRENT_DATE`). If `YYYY-11-DD < Today`:
  - The tile displays a 🔒 **`Read-Only`** badge and reduced opacity.
  - Clicking the tile is blocked in the browser with an explanation toast (`🔒 Nov X, YYYY has already elapsed and is in Read-Only Mode!`).
  - On the server (`netlify/functions/api.js`), `SELECT (MAKE_DATE($1::int, 11, $2::int) < CURRENT_DATE) AS is_elapsed` rejects any mutation attempt with **HTTP 403 Forbidden**.
- **Why All of Nov 2023, Nov 2024, and Nov 2025 Are Locked:** Because those November campaigns are in the past, all 30 days in 2023, 2024, and 2025 are permanently 🔒 `Read-Only`.
- **Using the "Elapsed Lock Reference" Selector (`#nnnMatrixClockModeSelect`):** Because today is October 29, 2026, all 30 days of November 2026 are currently future dates (✏️ `Editable`). If you want to test and see how the matrix behaves mid-way through November, switch the **Elapsed Lock Reference** dropdown from `Live System Date` to **`Demo Mid-Nov (Nov 15, 2026)`**:
  - Immediately, **Nov 1 through Nov 14, 2026** lock as 🔒 **`Read-Only`** (14 Elapsed).
  - **Nov 15 through Nov 30, 2026** remain ✏️ **`Editable`** (16 Current/Future).

5.4 NNN Urge Intensity Thermometer & Defcon Prescriptions (0–10)

On the right side of the 30-Day Matrix is the **NNN Urge Intensity Thermometer & Defcon Gauge**:

1. Slide the **Urge Voltage Slider (`0–10`)** to match your current urge intensity. The vertical mercury bar and Defcon badge update in real time:
   - **Level 0–3 (`DEFCON 5 • SOVEREIGN CALM`):** Baseline dopamine equilibrium. Prescription: Channel focus into deep work or reading.
   - **Level 4–6 (`DEFCON 3 • ELEVATED VOLTAGE`):** Moderate limbic restlessness. Prescription: Stand up immediately, drink 500ml of cold water, and perform 10 cycles of 4-7-8 breathing.
   - **Level 7–10 (`DEFCON 1 • RED ALERT OVERRIDE`):** Acute dopamine spike. Prescription: Put all screens in another room, drop for 30 pushups to muscular failure, and take a 3-minute cold shower.
2. Enter an optional context note (e.g., *"11:15 PM urge defeated with cold water + pushups"*) and click 🛡️ **Log Urge Reading & Claim +25 Aura XP**. This logs the reading directly into `sc_nnn_daily_tracker` for your active profile and awards `+25 Aura XP`.

Chapter 6: Year-Wise Immutable NNN Challenge Status Audit (sc_nnn_yearly_status_view)

6.1 Inspecting Whether a Profile Succeeded or Failed in Any Year

Directly below the 30-Day Survival Matrix (or accessible in one click via the 🏆 **Year-Wise NNN Status** pill in the NNN sub-navigation bar) is the **Year-Wise NNN Challenge Status By Profile** section (`#nnnYearlyStatusSection`). It provides an instant, tamper-proof audit of whether a specific profile in `sc_profiles` succeeded or failed in the NNN challenge for a particular year and across all tracked years (`2023` through `2030`):

1. **Select Profile Key (`#nnnStatusProfileSelect`):** Choose any profile from `sc_profiles`.
2. **Select Challenge Year (`#nnnStatusYearSelect`):** Choose any year from `Year 2023` to `Year 2030`.
3. **Read the Highlighted Single-Year Verdict Banner:** Displays the selected profile key, display name, challenge year, detailed evaluation reason (including the exact date of the first slip if failed, or the number of clean days logged), and the **Official Immutable NNN Status Badge**.
4. **Inspect the Multi-Year Breakdown Table:** Lists every year from `November 2030` down to `November 2023` for the selected profile, showing *Days Logged Clean / High-Urge*, *Slip / Failure Record*, the *Official Read-Only Status Badge*, and a **`View YYYY Matrix`** button that loads that year directly into the 30-day grid above.

6.2 The Three Strict Immutable Statuses Explained

Both the PostgreSQL view `sc_nnn_yearly_status_view` and the frontend evaluation engine (`computeNnnYearStatus`) enforce a strict three-value rule. The status is **always read-only and immutable** (there is no manual override button to falsify a verdict) and can only ever take one of these three exact values:

Exact Immutable Status String	Visual Badge Style	Exact Evaluation Condition (SQL & Frontend)
`'Failed'`	🔒 Red Immutable Badge	The profile has **1 or more days** with `status = 'fallen'` in `sc_nnn_daily_tracker` for that year, OR November 30 of that year has already passed with `0` survived days logged.
`'November Not Over Yet'`	🔒 Amber Immutable Badge	The profile has **0 fallen days** logged for that year AND today's date is on or before November 30 of that challenge year (`CURRENT_DATE <= MAKE_DATE(challenge_year, 11, 30)`).
`'Success'`	🔒 Emerald Immutable Badge	November 30 of that challenge year has concluded (`CURRENT_DATE > MAKE_DATE(challenge_year, 11, 30)`), the profile has **0 fallen days**, and survived days are logged.

6.3 How to Extend the Challenge Year Range Beyond 2030

The platform is pre-configured for years **2023 through 2030**. If you ever want to extend the year range further (for example, up to `2035`), follow these three quick steps:

1. **In NeonDB SQL Editor (`sc_nnn_yearly_status_view`):** Update the `generate_series` upper bound in the view definition:

   ```
   CREATE OR REPLACE VIEW sc_nnn_yearly_status_view AS
   WITH years AS (
       SELECT generate_series(2023, 2035) AS challenge_year
   ) ...
   ```

2. **In `index.html` Dropdowns:** Add `<option value="2031">...</option>` through `2035` inside `#nnnMatrixYearSelect` and `#nnnStatusYearSelect`.
3. **In `app.js` (`renderNnnYearlyStatus`):** Add the new years to `const yearsToList = [2035, ..., 2023];`.

Chapter 7: NNN Media Hub — Top 50 YouTube Cinema, Reddit Scraper, Lore & Gallery

7.1 Operating the Top 50 NNN YouTube Content Cinema

Clicking the 🎬 **Top 50 NNN YouTube Videos** sub-pill inside the NNN Challenge Hub opens the dynamic video cinema page:

- **Inline Privacy-Enhanced Cinema Player:** At the top of the pane is a 16:9 widescreen embedded player powered by `https://www.youtube-nocookie.com/embed/...`. Clicking any video card in the 50-video grid loads and plays that video immediately inside the page without redirecting you to YouTube's distracting homepage recommendation feed.
- **Category Filter & Instant Search:** Use the category dropdown (*All 50 Videos*, *NNN Survival Strategy*, *Dopamine & Neuroscience*, *Ojas & Transmutation*, *Stoic Discipline & Monk Mode*) or type any keyword in the search bar to filter the 50-video master index in real time.
- **Live YouTube Data API v3 Integration:** If you add a `YOUTUBE_API_KEY` in the API Keys Vault or Netlify Environment Variables and click 🔄 **Fetch Live YouTube API**, the platform queries Google's live YouTube Data API v3 endpoint for the latest high-engagement NNN and semen retention videos while keeping the 50-video master index available offline.

7.2 Scraping Live Reddit Communities (3-Tier Keyless Pipeline)

Clicking 📡 **Live Reddit Scraper (API)** opens the real-time community thread scraper:

1. Select your target community from the dropdown (`#nnnSubredditSelect`):
   - `r/nonutnovember` — Official NNN War Room roll calls, memes, and daily survival threads
   - `r/SemenRetention` — Long-term bio-transmutation, Ojas, and streak field reports
   - `r/NoFap` — 90-day neurological reboot recovery stories and urge defense tips
   - `r/Stoicism` — Practical Marcus Aurelius, Epictetus, and Seneca discipline discussions
   - `r/getdisciplined` — Habit architecture and deep work protocols
2. Click 🔄 **Scrape Live Threads**. Because Reddit's developer portal often restricts or delays OAuth API key approvals, the platform uses a **3-Tier 100% Keyless Scraping Pipeline**:
   - **Tier 1:** Browser-direct fetch from Reddit's public JSON endpoint (`https://www.reddit.com/r/{subreddit}/hot.json?limit=12&raw_json=1`).

- **Tier 2:** Serverless proxy fallback via **PullPush.io Reddit Search API** (`https://api.pullpush.io/reddit/search/submission/`) and **Hacker News Algolia API** inside `netlify/functions/public-feed.js`.
- **Tier 3:** Optional authenticated **Reddit OAuth2** (`REDDIT_CLIENT_ID` + `REDDIT_CLIENT_SECRET`) if configured.

7.3 NNN Funny Stories & Superpower Lore Vault (sc_nnn_stories)

Clicking 😂 **Funny Stories & Lore** opens the community humor and "superpower meme lore" archive backed by the `sc_nnn_stories` table in NeonDB:

- **Read & Laugh Salute:** Browse stories such as *"Accidentally Teleported to the Gym Squat Rack at 5:15 AM"* and *"The Great Peanut Butter Misunderstanding of November 3rd"*. Click the 😂 **Laugh Salute** button on any card to increment its `laugh_sparks` counter in NeonDB via `action: "spark_nnn_story"`.
- **Publish Your Own Story (`+35 Aura XP`):** Click ✍️ **Share Your NNN Story**, enter your handle, NNN day tag (e.g., `Day 17 of NNN`), humor category, title, and story body, and click **Publish Story to NeonDB**. Your story is permanently saved in `sc_nnn_stories` and awards `+35 Aura XP`.

7.4 History of NNN Timeline (1500 BCE – 2026) & Keyless Visual Gallery

- 📜 **History of NNN (`1500 BCE – 2026`):** Traces the six historical epochs of celibacy and November endurance—from Vedic *Brahmacharya & Ojas Sublimation* (1500 BCE) and Classical Greek Olympic *Taracheia* (776 BCE – 300 CE) to the 2003 Jiang et al. Day-7 testosterone discovery, the 2011 Urban Dictionary coinage of "No Nut November", the 2017–2020 viral Reddit movement, and the 2026 Sovereign Bio-Transmutation era.
- 🖼️ **Visual Gallery & Mural Vault (4 Built-In 100% Keyless APIs):** Streams high-resolution warrior sculptures, Stoic art, custom AI murals, and solar-core imagery with **zero API key signup required**:
  1. **Art Institute of Chicago Open REST API (`api.artic.edu`):** 100% keyless museum sculptures and classical paintings via IIIF image servers.
  2. **Wikimedia Commons Live API (`commons.wikimedia.org`):** 100% keyless classical warrior statues and historical engravings.
  3. **Pollinations.ai Live AI Mural Engine (`image.pollinations.ai`):** 100% keyless real-time AI generation of custom Spartan/Stoic murals from any search prompt you type.
  4. **NASA Open API (`api.nasa.gov`):** Pre-configured out of the box with NASA's official `DEMO_KEY` to stream high-resolution cosmic and solar-core imagery.

Chapter 8: Self-Touching & Intimate Activity Records Calendar (sc_self_touching_records)

8.1 Navigating the Month-Wise Activity Calendar Across Years (2023–2030)

Clicking 📅 **Self-Touching & Activity Calendar** in the top navigation bar opens the dedicated month-wise auditing module backed by the `sc_self_touching_records` table in NeonDB. This module is designed to give practitioners a complete, profile-scoped visual calendar of their self-touching and intimate activity patterns across months and years:

1. **Select Active Profile (`#stProfileSelect`):** At the top-right of the section, select any profile from `sc_profiles`. All calendar tiles, KPI counters, and filtered table rows immediately update to display only the records belonging to that `profile_key`.
2. **Read the 4 Live KPI Summary Cards:**
   - **Total Logged Dates (`#stStatTotalLogged`):** Total dates recorded in `sc_self_touching_records` for the selected profile.
   - **No Sexual Activity Days (`#stStatCleanDays`):** Count of pure retention days logged with `'No Sexual Activity'`.
   - **Immutable Elapsed Logs (`#stStatElapsedLocked`):** Count of logged dates in the past (`< Today`) that are permanently locked.
   - **Current / Future Logs (`#stStatFutureEditable`):** Count of logged dates on or after today (`≥ Today`) that remain editable.
3. **Month & Year Navigation Controls:**
   - Use the **Month Dropdown (`#stMonthSelect`)** to select any month from `January` to `December`.
   - Use the **Year Dropdown (`#stYearSelect`)** to select any year from `2023` to `2030`.
   - Use the **◂ (Previous Month)** and **▸ (Next Month)** buttons to step month-by-month across years, or click **`Today`** to jump back to the current month and year.

8.2 Automatic Elapsed-Date Immutability vs. Current/Future Editing

Every calendar cell automatically evaluates its date string (`YYYY-MM-DD`) against today's live date (`getLocalTodayIso()` on the client and `CURRENT_DATE` in PostgreSQL):

- **Elapsed Dates (`dateIso < Today`):**
  - Automatically transition into **Immutable Mode** and display a 🔒 **`Immutable`** badge in the top-right corner of the calendar cell.
  - Clicking an elapsed date cell is blocked on the frontend with an error toast (`🔒 Date YYYY-MM-DD has already elapsed and is permanently immutable! Only current or future dates can be changed.`).
  - In the filtered table below the calendar, elapsed dates display `🔒 Elapsed • Immutable` and `🔒 Locked` instead of an edit button.
  - On the backend (`netlify/functions/api.js`), `SELECT ($1::date < CURRENT_DATE) AS is_elapsed` enforces an strict server-side lock, returning **HTTP 403 Forbidden** if any request attempts to modify or clear a past date.
- **Current & Future Dates (`dateIso ≥ Today`):**
  - Display a gold/emerald ✏️ **`Editable`** badge in the top-right corner of the cell (and today's cell is highlighted with a gold `(Today)` pill).
  - Clicking any current or future date cell (or clicking ✏️ **`Change Status`** in the table below) opens the **Self-Touching & Sexual Activity Status Editor Modal** (`#selfTouchingModal`).

8.3 Logging & Clearing the 9 Official Activity Statuses (ST_01 to ST_09)

When you click an editable date (`≥ Today`), the Status Editor Modal opens pre-populated with that date and active profile key. You can assign any of the **9 exact official statuses** below:

Network Code	Exact Database Status String (`activity_status`)	Calendar Icon & Color Theme	Functional Meaning & Retention Context
`ST_01`	`'No Sexual Activity'`	🛡️ Emerald Green	Complete physical and visual celibacy / pure retention day.
`ST_02`	`'Only Gooning'`	⚠️ Amber Warning	Prolonged dopamine bingeing / edging trance without physical release.
`ST_03`	`'Masturbation With Ejaculation'`	💦 Crimson Red	Solo self-touching culminating in ejaculatory release (full MO slip).
`ST_04`	`'Masturbation Without Ejaculation'`	🔥 Orange Alert	Solo self-touching stopped prior to ejaculatory release.
`ST_05`	`'Penetrative Sex'`	❤️ Cyan Blue	Partnered penetrative intercourse.
`ST_06`	`'Oral Sex'`	💋 Pink Accent	Partnered oral intimacy.
`ST_07`	`'Light Couple Play'`	✨ Royal Purple	Non-ejaculatory affectionate or karezza-style couple bonding.
`ST_08`	`'Drink Partner''s Cum'`	🧪 Rose Coral	Specific intimate partner fluid intake log.
`ST_09`	`'Drink Own Cum'`	⚡ Fuchsia Violet	Specific solo fluid intake log.

How Network-Safe Status Code Encoding (`ST_01`–`ST_09`) Guarantees 100% Reliability: Because browser content blockers, DNS shields, and WAF rules frequently block outgoing HTTP `POST` payloads containing the literal word `"Sex"` (which previously affected `'No Sexual Activity'`, `'Penetrative Sex'`, and `'Oral Sex'`), the frontend translates your selected status into its neutral code (`status_code: "ST_01"` through `"ST_09"`, or `"ST_CLEAR"`) before sending the HTTP request. Inside `netlify/functions/api.js`, `normalizeSelfTouchingStatus()` maps that code back to the exact canonical string (`'No Sexual Activity'`, `'Penetrative Sex'`, `'Oral Sex'`, etc.) and executes:

```
INSERT INTO sc_self_touching_records (profile_key, record_date, activity_status, notes,
updated_at)
VALUES ($1, $2::date, $3, $4, NOW())
ON CONFLICT (profile_key, record_date)
DO UPDATE SET activity_status = EXCLUDED.activity_status, notes = EXCLUDED.notes,
updated_at = NOW();
```

8.4 Filtering Calendar Views Between 2 Dates & By Activity Status

The filter control panel above the calendar provides three powerful ways to slice and inspect your records:

- **Filter Calendar Between 2 Dates (`#stStartDateFilter` & `#stEndDateFilter`):** Select a **From Date** and a **To Date**. Any calendar cell outside that date window is visually dimmed (`opacity: 0.22`), while dates inside the window are highlighted with a gold border (`filter-highlighted`) and listed in the **Filtered Self-Touching & Activity Records Table** below.

- **Filter Dates By Status (`#stStatusFilterSelect` & `.st-status-chip` Buttons):** Choose a specific status from the dropdown (or click any of the 9 color-coded status chips below the filter bar, or select `All Logged Dates Only`) to highlight only the calendar dates matching that exact activity status.
- **Reset All Filters (`#stResetFiltersBtn`):** Click 🔄 **Reset All Filters** to clear both date-range inputs and restore the full-month view.

Chapter 9: 90-Day Reboot Plan, 8 Rank Tiers, 12-Week Ladder & Relapse Ledger

9.1 Unlocking the 8 Rank Progression Tiers

Open the 📈 **90-Day Reboot & Ranks** tab (`#tab-reboot`) to view your neurological recovery roadmap. As your active profile's PMO-Free streak increases, you automatically unlock eight progressive rank badges:

Tier	Min Days	Rank Title & Badge	Solfeggio Frequency & Orb Stage	Neuro-Biological Milestone
Tier 1	Day 0+	🌱 Seed Initiate	396 Hz Grounding • Ember Seed	Initial commitment to sovereignty; breaking automatic cue-response loops.
Tier 2	Day 3+	🔥 Spark Keeper	417 Hz Clearing • Vital Spark	Acute dopamine withdrawal peak; restlessness converts into physical drive.
Tier 3	Day 7+	🛡️ Endocrine Guardian	432 Hz Harmony • Androgen Pulse	Day-7 serum testosterone surge (+145.7% baseline per Jiang et al., 2003).
Tier 4	Day 14+	⚔️ Neural Warrior	528 Hz Repair • Solar Core	Two weeks clean; deeper slow-wave sleep, calmer eye contact, vocal resonance.
Tier 5	Day 30+	⚡ Alchemical Transmuter	639 Hz Radiance • Ojas Vortex	DeltaFosB clearance accelerates; sustained creative stamina and composure.
Tier 6	Day 60+	👑 Solar Sovereign	741 Hz Awakening • Supernova Halo	Striatal D2 receptor sensitivity substantially restored; natural joy in hard work.
Tier 7	Day 90+	🏛️ Ascended Architect	852 Hz Mastery • Crystalline Star	Full 90-Day Reboot benchmark achieved; prefrontal executive mastery.
Tier 8	Day 180+	🌌 Brahmacharya Sage	963 Hz Crown • Cosmic Singularity	Complete mastery of biological impulses and purposeful life-force direction.

9.2 Tracking the 12-Week Visual Ladder & Neuro-Recovery Chart

Below the rank grid, the **12-Week Rising Drop Visual Ladder** tracks your completion percentage toward each major physiological checkpoint (`Week 1 / Day 7`, `Week 2 / Day 14`, `Week 3 / Day 21`, `Week 4 / Day 28`, `Week 6 / Day 42`, `Week 8 / Day 56`, `Week 10 / Day 70`, and `Week 13 / Day 90`), paired with an interactive Chart.js recovery curve:

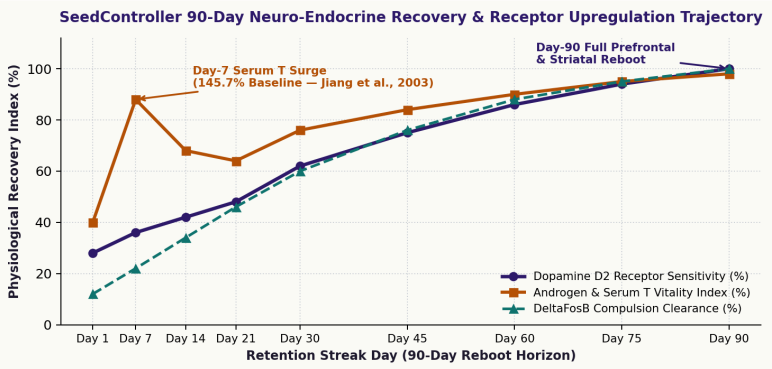

Figure 9.1 — 90-Day Dopamine D2 Receptor Sensitivity, Androgen Vitality Index, and DeltaFosB Clearance Trajectory.

9.3 Using the Non-Destructive Historical Relapse Ledger (sc_relapse_logs)

If a slip occurs, SeedController Sovereign uses a **Non-Destructive Historical Relapse Ledger** (`sc_relapse_logs`) so you never lose your historical streak data or your all-time record:

1. Click ⚠️ **Log Relapse / Reset** (in the Command Center or at the top of the Historical Relapse Ledger).
2. In the **Log Relapse & Trigger Analysis** modal, select:
   - **Affected Track (`streak_type`):**
     - `Full PMO Reset` — Resets `pmo_start_time`, `p_start_time`, and `mo_start_time` to `NOW()`.
     - `MO-Only Slip (Kept Visual Purity / P-Free)` — Resets `mo_start_time` and `pmo_start_time`, while preserving your `p_start_time` streak intact!
     - `P-Only Slip (Visual Peek Only)` — Resets `p_start_time` and `pmo_start_time`, while preserving `mo_start_time`.
   - **Primary Trigger Category (`trigger_category`):** e.g., *Late Night Scrolling*, *Stress / Work Burnout*, *Social Media Algorithm*, *Boredom & Isolation*, or *Complacency ("Just a peek")*.
   - **Emotional / Physiological State (`emotional_state`):** e.g., *Exhausted / Low Dopamine*, *Restless / Anxious*, or *Overconfident*.
   - **Actionable Lesson Learned (`lesson_learned`):** Your concrete protocol adjustment (e.g., *"Installed bedroom phone curfew after 10:30 PM"*).
3. Click **Record in Ledger & Reset Selected Track**. The platform saves the achieved streak days (`streak_days_achieved`) into `sc_relapse_logs` for your profile, updates `longest_streak_days = GREATEST(longest_streak_days, achieved)` in `sc_profiles`, and resets only the affected clock.

Chapter 10: Emergency Urge SOS, 432Hz Binaural Breathwork & AI Neural Mentor

10.1 Executing the 90-Second Emergency Urge SOS Protocol

Neurochemically, an acute urge wave peaks and begins to subside within **90 seconds** if you do not feed it with visual fantasy or physical stimulation. Whenever a sudden craving hits:

1. Click the crimson 🚨 **`Urge SOS`** button in the top-right header (visible from every tab).

2. The full-screen **Emergency Urge Override Modal** opens and immediately starts a **`01:30` (90-second) countdown clock**.
3. Execute the 4-step physical override displayed on screen while the timer counts down:
   - **Step 1:** Physically stand up and step away from your desk or bed immediately.
   - **Step 2:** Inhale deeply for 4 seconds, hold for 7 seconds, and exhale slowly for 8 seconds.
   - **Step 3:** Perform 25–30 pushups or air squats to flush blood flow from the limbic system into large skeletal muscle groups.
   - **Step 4:** Splash cold water on your face and neck to trigger the mammalian dive reflex.
4. Once the 90-second wave passes, click ✅ **`I Conquered This Urge (+40 Aura XP)`** (which logs `+40 Aura XP` to your active profile in `sc_profiles`) or click 🧘 **`Open Guided Breathwork & 432Hz Audio`** to transition directly into the Breathwork Pacer.

10.2 Operating the 3-Mode Paced Breathwork Ring & 432Hz Synthesizer

In the 🧘 **Urge Shield & Breathwork** tab (`#tab-urge`), the left panel houses the **Somatic Breathwork Pacer** and **Web Audio Binaural Synthesizer**:

- **Three Paced Breathing Protocols:**
  - **`4-4-4-4 Box Breath` (Navy SEAL Tactical Calm):** 4s Inhale → 4s Hold Full → 4s Exhale → 4s Hold Empty.
  - **`4-7-8 Vagal Brake` (Parasympathetic Reset):** 4s Nasal Inhale → 7s Deep Vagal Hold → 8s Long Exhale.
  - **`6-3-6 Ojas Draw` (Spinal Sublimation):** 6s Root Draw Inhale → 3s Crown Lock Hold → 6s Calm Release.
- **How to Run a Session:** Select a mode button and click ▶️ **Start Breathwork Session**. The concentric visual ring expands and contracts smoothly with each phase while counting down the seconds. Every completed cycle increments your session counter and awards **`+10 Aura XP`**.
- **Synthesized 432Hz Theta Binaural Hypnosis Drone:** Click 🔊 **Play 432Hz Hypnosis Drone**. Using the browser's native **Web Audio API** (`AudioContext`), the app synthesizes two pure sine-wave oscillators (`216 Hz` left/carrier + `222 Hz` right/offset, creating a `6 Hz` Alpha-Theta binaural beat at `432 Hz` harmonic resonance) with zero external MP3 dependencies. Click the button again to stop the audio drone.

10.3 Consulting the 24/7 Context-Aware AI Neural Mentor

The right panel of the 🧘 **Urge Shield & Breathwork** tab features the **24/7 AI Retention & Transmutation Coach**:

- **Streak-Aware Calibration:** Every response is dynamically calibrated to your active profile's current PMO streak day (`Day X`) and rank title.
- **Quick Protocol Chips:** Click 🔥 **`Late-Night Urge Protocol`**, 📉 **`Navigating Dopamine Flatline`**, or ⚡ **`How to Transmute Energy into Coding/Gym`** for instant structured protocols, or type any custom question into the chat input box and press **Send**.

Chapter 11: Science Feed, Blogs, Private Journal, Brotherhood Wall & Porn Blocker

11.1 Querying Live NIH NCBI PubMed Clinical Studies

Open the 🧬 **Science & Live APIs** tab (`#tab-science`):

1. Review the top three foundational clinical study cards (*Serum Testosterone Dynamics*, *Striatal D2 Receptor Recovery*, and *Slow Breathing & Vagal Tone*), each with direct clickable links to PubMed (`https://pubmed.ncbi.nlm.nih.gov/...`).
2. In the **Live NIH NCBI PubMed Research Feed** panel, select a research query from the dropdown (`#pubmedTopicSelect` — e.g., *Dopamine Receptor Neuroplasticity & Abstinence*, *Testosterone & Abstinence Endocrinology*, *Prefrontal Cortex Self-Control & Craving*, or *Heart Rate Variability & Slow Breathing*) and click 🔄 **Query PubMed API**.
3. The platform queries the live **NCBI Entrez E-Utilities API** (`esearch.fcgi` + `esummary.fcgi`), displaying real peer-reviewed PMIDs, journal titles, publication years, authors, and direct PubMed links.

11.2 Reading, Upvoting & Publishing in Blogs & Field Reports (sc_blogs)

Open the 📰 **Blogs & Articles** tab (`#tab-blogs`):

- **Filter & Read Full Articles:** Filter articles by category (*All Categories*, *Endocrinology*, *Neuroscience*, *Transmutation*, *Field Report*). Click **`Read Full`** on any card to open the distraction-free **Full Article Reader Modal** (`#blogReaderModal`), or click 🔥 to upvote the article in `sc_blogs` (`action: "upvote_blog"`).
- **Publish a New Field Report (`+50 Aura XP`):** Click ✍️ **Publish New Article**, fill in the title, author handle, category, estimated read time, summary, full article body, and optional scientific source URL, and click **Publish to NeonDB**. Your article is saved in `sc_blogs` and awards `+50 Aura XP`.

11.3 Recording Private Journal Reflections & Brotherhood Pledges

Open the 📓 **Journal & Brotherhood** tab (`#tab-journal`):

- **Private Retention & Transmutation Journal (`sc_journal_entries`, Profile-Scoped):**
  1. Enter an entry title (e.g., *"Day 21: Deep Coding Flow & Zero Evening Urges"*) and select your current mood state (`⚡ High Drive & Focused`, `🧘 Calm & Grounded`, `🔥 Intense Transmutation`, `🛡️ Navigating Flatline`, or `⚠️ High Urge Vigilance`).
  2. Adjust the **Energy Level (`1–10`)** slider and **Urge Intensity (`0–10`)** slider.
  3. Write your reflection and click 💾 **Save Journal Entry to NeonDB (+30 Aura XP)**. Entries are scoped strictly to your active `profile_key` in `sc_journal_entries` and can be deleted anytime via the `Delete` button on each card.
- **Brotherhood Accountability Check-In Wall (`sc_community_checkins`):**
  1. Enter your warrior handle, current streak days, and daily accountability pledge, then click ⚡ **Post Pledge (+20 Aura XP)**.
  2. Click ⚡ **`Salute`** on any brother's check-in card to increment its salute counter in NeonDB (`action: "spark_checkin"`).

11.4 Generating a Custom /etc/hosts Porn Blocker & JSON Backups

Open the 🗄️ **NeonDB & Blocker Setup** tab (`#tab-settings`):

- **System-Level `/etc/hosts` Trigger-Domain Shield Generator:**
  1. In the **Custom Trigger Domains Blocklist** textarea (`#blockedDomainsInput`), enter comma-separated domains you want to block at the operating-system level.
  2. Click 💾 **Save Blocklist to NeonDB** to store your list in `sc_profiles.custom_blocked_domains`.
  3. Click ⬇️ **Download `/etc/hosts` Blocklist** to download `seedcontroller-hosts-shield.txt`, which maps every domain (and its `www.` subdomain) to `0.0.0.0` for placement in `/etc/hosts` (macOS/Linux) or `C:\Windows\System32\drivers\etc\hosts` (Windows), alongside recommended CleanBrowsing Adult Filter DNS (`185.228.168.10`) and Cloudflare Family DNS (`1.1.1.3`) addresses.
- **Portable JSON State Backup:** Click 📦 **Export Full JSON Backup** (`#exportDataBtn`) at any time to download a complete timestamped JSON snapshot (`seedcontroller-backup-YYYY-MM-DD.json`) of all profiles, matrices, calendars, journals, and logs.

Chapter 12: Complete Database Reference, API Payloads & Troubleshooting Guide

12.1 Complete NeonDB PostgreSQL Table & View Reference

All database objects use the `sc_` prefix so they can coexist safely in any NeonDB database. Below is the complete schema specification across all 9 tables and 1 view:

Object Name	Key Columns & Types	Constraints & Mutability Rules
`sc_profiles`	`profile_key VARCHAR(64)`, `display_name`, `pmo_start_time`, `p_start_time`, `mo_start_time`, `longest_streak_days`, `aura_points`, `target_days`, `fasting_active`, `fasting_start_time`, `fasting_target_hours`, `blocker_strictness`, `custom_blocked_domains`	`PRIMARY KEY (profile_key)`. Master profile record; `longest_streak_days` uses `GREATEST()` so it never decreases.
`sc_daily_habits`	`id SERIAL`, `profile_key VARCHAR(64)`, `habit_code VARCHAR(64)`, `habit_label`, `aura_reward INT`, `completed_date DATE`	`UNIQUE (profile_key, habit_code, completed_date)`. Tracks daily habits per profile.
`sc_relapse_logs`	`id SERIAL`, `profile_key VARCHAR(64)`, `streak_type VARCHAR(16)`, `streak_days_achieved NUMERIC(6,2)`, `trigger_category`, `emotional_state`, `lesson_learned`, `logged_at`	Append-only historical ledger scoped by `profile_key`.

Object Name	Key Columns & Types	Constraints & Mutability Rules
`sc_journal_entries`	`id SERIAL`, `profile_key VARCHAR(64)`, `title`, `mood`, `energy_level INT`, `urge_intensity INT`, `content TEXT`, `created_at`	Private reflections scoped by `profile_key`.
`sc_blogs`	`id SERIAL`, `title`, `author`, `category`, `read_time`, `summary`, `content`, `source_url`, `upvotes INT`	Global science and field-report repository.
`sc_community_checkins`	`id SERIAL`, `handle`, `rank_badge`, `streak_days INT`, `pledge_text`, `sparks INT`, `created_at`	Global brotherhood accountability wall.
`sc_nnn_daily_tracker`	`id SERIAL`, `profile_key VARCHAR(64)`, `challenge_year INT`, `day_number INT (1–30)`, `status VARCHAR(24)`, `urge_level INT (0–10)`, `trigger_note`	`UNIQUE (profile_key, challenge_year, day_number)`. Elapsed November dates (< `CURRENT_DATE`) are locked Read-Only (HTTP 403).
`sc_nnn_stories`	`id SERIAL`, `author_handle`, `day_tag`, `title`, `story_body`, `humor_tag`, `laugh_sparks INT`	Global NNN comedic chronicles and meme lore vault.
`sc_self_touching_records`	`id SERIAL`, `profile_key VARCHAR(64)`, `record_date DATE`, `activity_status VARCHAR(64)`, `notes VARCHAR(255)`, `updated_at`	`UNIQUE (profile_key, record_date)`. Elapsed dates (< `CURRENT_DATE`) are permanently immutable (HTTP 403).
`sc_nnn_yearly_status_view`	`profile_key`, `display_name`, `challenge_year (2023–2030)`, `days_survived`, `days_fallen`, `first_fallen_day`, `nnn_status`	Read-Only SQL View. Evaluates strictly to `'November Not Over Yet'`, `'Failed'`, or `'Success'`.

12.2 Serverless API Endpoint Specification (/.netlify/functions/api)

All frontend reads and writes communicate with `netlify/functions/api.js`:

- **`GET /.netlify/functions/api?profileKey={profile_key}`:** Returns the complete synchronized state JSON containing `profile`, `allProfiles`, `todayHabits`, `relapseHistory`, `journalEntries`, `blogs`, `communityCheckins`, `nnnDailyTracker`, `allNnnDailyTracker`, `nnnYearlyStatus`, `selfTouchingRecords`, `allSelfTouchingRecords`, and `nnnStories`.
- **`POST /.netlify/functions/api?profileKey={profile_key}` Supported Actions:**
  - `action: "create_profile"` / `"update_profile"` — Creates or updates a practitioner row in `sc_profiles` (preserving `fasting_start_time` unless explicitly modified) and returns `profile` + `allProfiles`.

- `action: "toggle_habit"` — Toggles a daily habit in `sc_daily_habits` for `CURRENT_DATE` and adjusts `aura_points`.
- `action: "log_relapse"` — Appends a non-destructive entry to `sc_relapse_logs` and resets the selected streak clock in `sc_profiles`.
- `action: "add_journal"` / `"delete_journal"` — Inserts or deletes a profile-scoped journal entry in `sc_journal_entries`.
- `action: "log_nnn_day"` — Validates that `MAKE_DATE(challenge_year, 11, day_number) ≥ CURRENT_DATE`, then upserts or deletes (when `status === "unlogged"`) the row in `sc_nnn_daily_tracker` for `(profile_key, challenge_year, day_number)`.
- `action: "save_self_touching_record"` — Validates that `record_date ≥ CURRENT_DATE`, translates `status_code` (`ST_01`–`ST_09` or `ST_CLEAR`) to the canonical status string, upserts or deletes the row in `sc_self_touching_records` for `(profile_key, record_date)`, and returns the updated `record` and `selfTouchingRecords` array.
- `action: "add_blog"`, `"upvote_blog"`, `"add_checkin"`, `"spark_checkin"`, `"add_nnn_story"`, `"spark_nnn_story"` — Community and content actions.

12.3 End-to-End Troubleshooting & Verification Checklist

1. **Header Pill Shows Amber Instead of Green (● `NeonDB Connected`):** Open the 🗄️ **NeonDB & Blocker Setup** tab and read the **Live NeonDB Connection Diagnostic Box** (`#dbDiagnosticOutput`). Verify that (a) your environment variable in Netlify is named `DATABASE_URL` (all caps), (b) you triggered a new deploy in Netlify after adding the variable, and (c) `package.json` was included in your root directory so Netlify bundled `pg`.
2. **Testing Elapsed vs. Editable Dates in November Survival Matrix:** Remember that years `2023`, `2024`, and `2025` are in the past and therefore permanently 🔒 `Read-Only`. Select `November 2026` (or `2027`–`2030`) to edit tiles, or switch **Elapsed Lock Reference** to `Demo Mid-Nov (Nov 15, 2026)` to see `Nov 1`–`14` locked and `Nov 15`–`30` editable.
3. **Verifying Real-Time Database Writes in NeonDB:** After clicking any editable tile in the November Daily Survival Matrix or saving any of the 9 statuses in the Self-Touching Calendar, check the diagnostic box in 🗄️ **NeonDB & Blocker Setup**—it displays ● `NEONDB WRITE CONFIRMED (action)` along with the exact profile key and timestamp. You can also run `SELECT * FROM sc_nnn_daily_tracker ORDER BY logged_at DESC LIMIT 10;` or `SELECT * FROM sc_self_touching_records ORDER BY updated_at DESC LIMIT 10;` in the NeonDB SQL Editor to see your updated rows immediately.
